CHIVE/C-29-65  
26 October 1965

**MEMORANDUM FOR THE RECORD**

**SUBJECT: Development Staff/OCR**

**BACKGROUND**

The Phase III effort on Project CHIVE will be organized as the CHIVE Task Force, drawing on personnel from Development Staff, OCR, and from Development Division, OCS, as well as contractor support. Since Phase III will be a joint effort of two Offices with equal responsibility but from different Directorates, it is both appropriate and necessary that the senior officers serving as Chiefs of the two components be of equal grade. The senior OCS officer will be Director of the CHIVE Task Force. The senior OCR officer will serve as Associate Director and will assist the Director in determining task force policy. He will report, for administrative purposes, to the Director of Central Reference.

The OCR contingent of the CHIVE Task Force will be organized in two groups: 1) System Design and Development Group, and 2) China Operations Group. Chiefs of these components will receive substantive direction from the Director, CTF. Administrative direction, on the other hand, will be provided by the Associate Director.

The Director, CHIVE Task Force is charged with overall responsibility for the timely and satisfactory development of the CHIVE System for OCR. As senior OCR representative on CTF, the Associate Director will be responsible for making sure that progress on each task is in phase with that of related tasks and with the master development plan. He will also be responsible for the operational test plan and for evaluation of the test results. He will not, however, provide technical guidance nor will he direct individual development tasks, as such.

GROUP 1  
Excluded from automatic  
downgrading and  
declassification

- 2 -

This role in Phase III reaches its climax in the development and implementation of the system test. Such a test must necessarily test all system capabilities and interact with all OCB components. The results of this test and their careful evaluation will play the major role in determining the critical parameters for Phase IV as well as how, when, and by what means the CHIVE concept will be extended to other geographical areas.
